

XProtect[®] Mobile

Keeping you close to what's important

Today's reality requires access to your surveillance system from anywhere. People are often on-the-go and accessing the video only when on premises is no longer enough. XProtect Mobile is a free application for all Milestone products offering a seamless way to access the surveillance system from anywhere using smartphones and tablets.

Security at your fingertips

Available as a free download from the App Store and Google Play, XProtect Mobile enables users to view, playback and export video directly on the mobile device, so whether at home, at work or on-the-go, users are always in control of their surveillance systems.

Push notifications

Providing the ultimate peace of mind experience to the user, XProtect Mobile supports push notification. Based on alarms pre-defined in the XProtect video management system, XProtect Mobile automatically notifies the user, if anything in the system needs attention. Push notifications can easily be shared with other system users to improve collaboration and speed up incident response.

Key benefits

- Access the video surveillance system from anywhere
- Never lose a moment and stay informed on any arising situation
- Act immediately and prevent an escalating incident from happening
- Document events that the fixed cameras can't capture

Key features

- View live, playback and export video
- Get notified automatically if anything needs attention
- Listen-in and communicate via speakers and microphones connected to cameras
- Manage access requests remotely
- Push live video from the device's camera directly in to the XProtect system to document incidents as they happen
- Available in 30 languages
- Supports Wi-Fi, 3G and 4G connections

Audio

Get the complete picture and tap into the power of adding audio to the video surveillance installation with the possibility to listen to audio and speak through connected cameras with the push-to-talk functionality. This two-way audio support allows remote users to listen to audio and communicate with people or crowds from anywhere.

Control outputs and events (access control)

Whether or not physically on-site, users can control outputs like switching lights on and off and granting or denying access control requests to ensure uninterrupted security operations while on the move.

Video Push

Document incidents as they happen by pushing live GPS-enabled video from the mobile devices' camera back to the XProtect system to be used for later investigation or for increased situational awareness for first responders.

Download

XProtect Mobile supports mobile devices running the following mobile operating systems and higher: Android 5.0 and iOS9.

Secure remote user access

The communication between the mobile server and mobile/web clients support HTTPS, which provides secure authentication and bidirectional encryption of all information exchanged, including user credentials, configuration and media data

Two-step verification

To protect XProtect VMS system from cyberattacks via the remote web and mobile interfaces, it is possible to apply a two-step verification process for users accessing the VMS system via the XProtect Web Client or the XProtect Mobile application.

Milestone Systems is a global industry leader in open platform IP video management software, founded in 1998 and now operating as a standalone company in the Canon Group. Milestone technology is easy to manage, reliable and proven in thousands of customer installations, providing flexible choices in network hardware and integrations with other systems. Sold through partners in more than 100 countries, Milestone solutions help organizations to manage risks, protect people and assets, optimize processes and reduce costs.
